

In your first few weeks at BHASVIC you will be learning a new language and/ or upgrading your programming skills to learn C (this is what Python, Java, JavaScript, C++ and C# are based on).

We want you to come into your first classes ready to go – therefore, your summer work is:

Complete our **Intro to C Coding** chapter - you can access it using this link:

<https://drive.google.com/file/d/0ByHr0lmgP93GbENhUFh3aWxFUVk/view?usp=sharing>

Just a **point to note** – you can copy & paste from the PDF file to the IDEs below, BUT sometimes the punctuation marks don't copy well, especially speech marks. You will be able to see this as they will be italic rather than straight. You may also see the text inside them is black NOT red.

If your code won't run that may be why – try deleting the speech marks and retyping them in.

Once you have completed each of the Task programs

Save the work you complete onto a pen drive or in the Cloud so that you can access them and **submit them** to your teacher **at the start of term** (Ruth, Ben or Helen).

If you get stuck with any of the exercises, or need to ask any questions then you can email for support:

Ruth Hilliard r.hilliard@bhasvic.ac.uk

Resources

Install the DevC++ compiler & IDE from here:

<http://www.bloodshed.net/dev/devcpp.html> (Choose the top option 5.0 beta with Mingw/GCC)

OR if you have a Mac/ you have any issues you can do the work online here:

https://www.tutorialspoint.com/compile_c_online.php
